Abstract

The main objective of this investigation is to study the Personality amongst Children of employed and Unemployed Mothers. The sample consisted of 120 children of unemployed mothers and 120 children of employed mothers in Varanasi City with age range of 9 to 16 years. Multi-dimensional Personality Inventory constructed by Manju Agrawal and the same by researcher, Madhavi Srivastava was used to collect data. Obtained data was analyzed by using t-test. Results revealed that there was no significant difference in the personality dimensions like extroversion Introversion, self concept, independence-dependence adjustment, anxiety and overall personality at any level of confidence. Only temperament dimension of personality will be significant in both the groups.

Keywords: Employed mothers, Personality, Unemployed mothers.
