Abstract

We studied in this paper the optimal investment strategies for DC pension fund with multiple contributors by applying Hamilton Jacobi – Bellman equation, Legendre transformation and dual theory to find the explicit solution for CRRA and CARA utility functions respectively. We obtained a general solution for CARA utility function similar to that with only one contributor as in Gao (2009) and a different result for CRRA utility function when compared to the one with one contributor.

Keywords: CRRA, CARA, DC, Pension fund, Optimal Strategies, Legendre Transform.
